

# mammut EAGLE

mammut EAGLE with connection to every bank in the world

- mammut EAGLE connects your ERP-System to a large part of banks around the world.
- Thanks to AFFD (Automatic File Format Detection) it connects within minutes to any ERP-System (PAIN008, LSV+, SEPA DD only)
- Secure data transfer with „zero footprint“ technology – no media disruption (based on IKS and SOX)

### Bank Outgoing:

- reach every bank around the world
- all country-specific file formats of the European countries (list on request)
- all PAIN formats of the SEPA countries (list on request)
- all variations of the SWIFT format MT101 (list on request)

### Bank Incoming:

- reach every bank around the world
- numerous common bank formats such as account data, ESR, e-documents, Deposit information, processing records etc. The customer determines if the incoming bank data needs to be processed in original form or be forwarded to the ERP system after having been processed according to specific criteria. (list on request)
- available modules for processed data transfer, ESR splitting, ERP Connector, PDF Routing

### What is AFFD?

AFFD automatically recognizes the format of a bank file and the customer contained in it. This makes it possible to determine the transport route. The stored contract data makes it possible to enable an automatic file transfer to the corresponding financial institutions. For safety reasons, only direct debit/payment entries can be sent fully automatically without any manual releases. The complete list of recognizable outgoing formats is available on request. From this list, the customer can select the formats that he needs.
